

Cape Bailey track

2 hrs 30 mins

Moderate track

7.4 km Return

135m

3

This great return walk follows the Cape Bailey walking track as it winds along the coast, through thick heath and small sand dunes, to the Cape Bailey lighthouse, with great ocean views all the way. Also of interest is the wide variety of flora and fauna that can be found on this walk, from a number of different types of reptiles and amphibians to the hanging swamps and wild flowers (in spring). There is even some good whale watching opportunities in June, July, Sept and Oct.

Botany Bay National Park

Are you ready to have fun?

Please ensure you and your group are well prepared and equipped for all possible hazards and delays. Check park closures, weather information and Fire Danger Rating before setting out. Optional side trips and alternate routes noted are not included in this walks overall grade, length or time estimate. Please allow extra time for resting and exploring areas of interest. The authors, staff and owners of wildwalks take care in preparing this information but will not accept responsibility for any inconvenience, loss or injury you may experience. Please take care, have fun - Happy Walking.

Getting there You can get to End of Polo Street (gps: -34.0105, 151.2228) by car or bus. Car: There is free parking available.

This is a return, so you will finish back at the start.

Find up to date and more information including; travel directions, weather, park closures and walker feedback at <http://wild.tl/cbt>

0 | End of Polo Street

(400 m 8 mins) From the end of the Polo St, this walk heads around the metal National Parks gate and south-east along the service trail, with some power lines on the right-hand side. As the track heads further south-east, the track steadily climbs up to the top of a gentle hill and continues along until it comes to the intersection of the Cape Bailey walk and the radar service trail.

0.4 | Int of Cape Bailey track and water tank service tr

(1.7 km 28 mins) Turn left: From the intersection, this walk follows the service trail heading east (with the water tank on the right) for a very short distance until it comes to the intersection with a link bush track on the left.

Continue straight: From the intersection, the walk initially heads east, then turns right along the wide bush track, keeping the water tank and the radar on the right as it winds through the heath forest, coming to a four-way intersection with a wide management trail.

Veer left: From the intersection, the walk heads south (with the water tank directly behind) along the sandy bush track, and then along the rock-shelf until coming to an intersection marked by several arrows.

Turn right: From the intersection, this walk heads south (keeping the ocean to the left, about 150m away) along the rock and the sandy track, through the low dense scrub. Along this part of the track, there are several sections where wind and water erosion has developed small holes along the rock shelf that give it a very interesting look. After some time, this walk passes a small bush track on the left (which heads out to the coast), and shortly after this, comes to an intersection with a service trail at Tabbigai Gap.

2.1 | Tabbigai Gap Track Int

(550 m 9 mins) Veer left: From the Tabbigai Gap, this walk follows the clear, sandy track east (with the Tabbigai Gap on the left) up a short hill until it turns right at the small clearing. The track stays away from the ocean and soon comes to a large sand dune clearing. From the other end of the clearing, the walk follows the track south (ocean on the left) through the thick scrub, winding along until it rises up a hill to a long sand dune clearing. From the far end of this

clearing, the walk follows the overgrown track through the thick scrub, until it widens out a little and continues south for a short distance, to the intersection in the pit of a sand dune, with a large hanging swamp on the right.

2.65 | Hanging Swamps

There are a number of hanging swamps that can be found along the Cape Bailey walk. They are home to a number of different plants and animals like reeds and frogs. Hanging swamps are formed on high ground when rainfall seeps out of surrounding hills and accumulates in a slight depression, over time forming a swamp. Interestingly, they are sometimes difficult to see from far away as the thick build up of reeds and other plant life often cover the water.

2.65 | Sand dune int

(950 m 18 mins) Turn right: From the intersection, this walk follows the narrow bush track that heads west to the top of the dunes. (From the top of the dune there are some great views of the hanging swamp straight ahead). The track then turns left and drops off the top of the sand dune, keeping the swamp on the right. The track then climbs a sandy hill to some more views before turning left and heading along a sandy track, through several more large sand dunes. After these dunes, the track starts to flatten out and widen, to head along to an intersection with a bush track (which heads to the lighthouse).

3.6 | Int of Cape Bailey Lighthouse track

(80 m 2 mins) Veer right: From the intersection, this walk follows the sandy bush track, heading up and away from the ocean. The track is relatively defined for most of the way, however in the last 20m the track becomes quite overgrown and a little less defined (the lighthouse is always visible). Once at the lighthouse, there are good views inland, however the views to the east are largely blocked by the high scrub.

3.68 | Cape Baily Lighthouse

Established in 1950, the lighthouse was required so north-bound shipping could hug the coast and avoid the strong southerly currents further out to sea. This lighthouse can be found a stone's-throw from the Cape Baily coastal walk, about 1.5 kilometres north from the Joseph Banks Drive car park. [More info.](#)
